Expanding the CalEITC: A Smart Investment to Broaden Economic Security in California

MARCH 11, 2019
California Budget & Policy Center

The Budget Center was established in 1995 to provide Californians with a source of timely, objective, and accessible expertise on state fiscal and economic policy issues. The Budget Center engages in independent fiscal and policy analysis and public education with the goal of improving the economic and social well-being of low- and middle-income Californians. Support for the Budget Center comes from foundation grants, subscriptions, and individual contributions. Please visit our website at calbudgetcenter.org.

Acknowledgments

Alissa Anderson and Sara Kimberlin prepared this chartbook.

Percentage of US Adults With Incomes Below Twice the Poverty Line Who Experienced Hardship, 2017

Note: Poverty line is based on the Official Poverty Measure. Hardship includes the inability to afford housing, utilities, medical bills, or sufficient food in the past year. Adults are ages 18 to 64. Source: Urban Institute
The CalEITC is a Tool for Broadening Economic Security in California

This tax credit helps families and individuals make ends meet.
The CalEITC Is a Refundable State Tax Credit Modeled After the Federal EITC

- Established by the 2015-16 budget agreement, the CalEITC boosts the incomes of workers with low earnings and their families. Specifically, the credit:

  - Reduces the amount of state income tax that families or individuals owe based on how much they earn from work and how many children they support.

  - Is refundable, meaning that families or individuals who qualify for a credit that exceeds the amount of state income tax they owe receive the balance as a tax refund. People who do not owe any state income tax get the full CalEITC that they qualify for as a refund.
Twenty-Nine States and D.C. Have Enacted Earned Income Tax Credits (EITCs), 2018

Note: Refundability in Delaware is pending action by the state’s governor.

*Refundable EITCs give working households the full value of the credit they earn even if it exceeds their income tax liability.

Source: Center on Budget and Policy Priorities
The CalEITC Is Structured Differently From Other State EITCs

• California is one of 29 states and the District of Columbia with a state EITC.
  — Nearly all state EITCs are structured like the federal EITC, meaning that every family or individual who qualifies for the federal credit also qualifies for the state’s credit.
  — The majority of state EITCs provide a credit equal to 20% or less of the federal EITC.

• The CalEITC is structured differently from other state EITCs.
  — It is available to only a portion of families and individuals who qualify for the federal EITC – those with low incomes.
  — It provides the largest refundable state EITC in the nation – equal to 85% of the federal EITC – to the lowest-income families and individuals.
The Typical State EITC Provides a Credit to Every Tax Filer Who Qualifies for the Federal EITC, and the State Credit Is Often 20% or Less of the Federal Credit

Note: Federal and typical state EITC is for head-of-household filers with two children.
The CalEITC Is Available to Only a Portion of Tax Filers Who Qualify for the Federal EITC, but Those With Very Low Incomes Qualify for a Large State Credit

Note: Federal and typical state EITC is for head-of-household filers with two children. CalEITC is for head-of-household and married filing-joint filers with two children.
Previous CalEITC Expansions Have Increased the Credit’s Reach

- **2015**: Income Limit Linked to Minimum Wage & Self-Employed Included
- **2016**: Age Limit Extended & Income Limit Modestly Raised
- **2017**: Income Limit Linked to Minimum Wage & Self-Employed Included
- **2018**: Age Limit Extended & Income Limit Modestly Raised
California Has Modestly Expanded the CalEITC Twice Since It Was First Created

• The 2017-18 budget agreement extended the CalEITC to many more families and individuals beginning in tax year 2017.
  – Self-employed workers who were originally excluded from the credit became eligible.
  – The income eligibility limits were substantially raised (up to the level of a full-time minimum-wage annual salary, for filers with children), although those who became eligible for the credit due to this change qualify for relatively small credits.

• The 2018-19 budget agreement extended the CalEITC to additional families and individuals beginning in tax year 2018.
  – Workers ages 18 to 24 or 65+ who were previously excluded from the credit became eligible.
  – The income eligibility limits were modestly increased further.
CalEITC Claims Increased Significantly in 2017 After the First Expansion and Will Likely Increase Modestly in 2018 Due to the Second Expansion

The CalEITC, Together With Federal Tax Credits, Significantly Boosts the Incomes of Families With Low Earnings From Work

Percent Increase in Income for Parents With Two Children, Tax Year 2018

Note: Assumes an $11 hourly wage and 50 weeks of work per year.

Source: Budget center analysis of Section 17052 of the California Revenue and Taxation Code and Section 32 of Title 26 of the Internal Revenue Code
Key Features of the CalEITC
The Maximum CalEITC for Families With Children Is Large, and Some Families With Very Low Incomes Qualify for a Credit of At Least $1,000 (Tax Year 2018)

Tax filers who qualify for a credit of at least $1,000 are families with:

- 3+ children and incomes between about $2,700 and $12,400
- 2 children and incomes between about $3,000 and $12,100
- 1 child and incomes between about $3,500 and $7,300
Tax Filers Who Have Incomes That Fall Into the “Tail” End of the CalEITC Qualify for Relatively Small Credits (Tax Year 2018)

Tax filers who have incomes that fall within the "tail" of the CalEITC qualify for relatively small credits (less than about $260 for families with children and less than about $100 for both workers without children and non-custodial parents).
For Families With Children, the Income Limit to Qualify for the CalEITC in Tax Year 2018 Is Below the Poverty Line in Many Parts of the State

2017 supplemental poverty thresholds for a parent with up to three children living in California range from about $17,300 to about $37,700.

Note: Poverty thresholds are for renters based on the Supplemental Poverty Measure.
For People Without Children, the Income Limit to Qualify for the CalEITC in Tax Year 2018 Is Below the Poverty Line in Some Parts of the State

Note: People without children includes non-custodial parents. Poverty thresholds are for renters based on the Supplemental Poverty Measure.
For Families With Children, the Income Limit to Qualify for the CalEITC Is Considerably Lower Than the Income Limits to Qualify for the Federal EITC in Tax Year 2018

Note: Federal EITC is for head-of-household tax filers. CalEITC is for head-of-household and married filing-joint filers.
For People Without Children, the Income Limit to Qualify for the CalEITC Is Slightly Higher Than That of the Federal EITC in Tax Year 2018

Note: People without children includes non-custodial parents. Federal EITC is for single tax filers. CalEITC is for single and married filing-joint filers.
Research Demonstrates Many Benefits of the Federal EITC for Families, Children, and Communities

The CalEITC builds on the success of the federal credit.
By directly boosting families’ incomes, the federal EITC, together with the Child Tax Credit, lifts more of the nation’s children out of poverty than any other federal program.

In California, these two credits lifted nearly 1.3 million people – including 643,000 children – out of poverty each year, on average, between 2015 and 2017, according to a Center on Budget and Policy Priorities analysis based on the Supplemental Poverty Measure.

The federal EITC also indirectly boosts families’ incomes by increasing employment. In fact, when this indirect effect of the EITC is taken into account, the credit reduces poverty among single mothers nearly twice as much as it does due solely to the direct impact of the credit.

By building on the federal EITC, state EITCs further reduce poverty, particularly among children. Larger state credits do more to reduce poverty than smaller state credits.
The Federal EITC Boosts Employment

- By **rewarding** work, the federal EITC significantly boosts employment among single mothers, according to a substantial **body of research**. For example, studies find that expansions of the federal EITC in the 1990s:
  - Raised **employment** among single mothers more than the 1996 welfare law, which imposed strict **work requirements** on families receiving cash assistance.
  - Significantly **increased** the number of families moving from cash welfare assistance to work.

- **Research also links the federal EITC to increased earnings in the long-run.** Single mothers of young children who had access to a more generous EITC during the first 17 years of adulthood worked more hours and had higher earnings at age 40, according to one study.
The Federal EITC May Improve Health

- The federal EITC may improve health for mothers and babies, according to several studies. For example, following federal EITC expansions in the 1990s:
  - Infants born to mothers who likely received the largest increases in the credit had the greatest improvements in health measures, such as birth weight, which is a key predictor of health and economic well-being in adulthood.
  - Mothers experienced improved health, including reduced stress – an important outcome given the negative effects that maternal stress may have on children’s development.
- The Centers for Disease Control considers the federal EITC a “non-clinical intervention” that can improve the health of communities by improving living conditions that are associated with poor health.
State EITCs Have Also Been Linked to Better Health

- **State EITCs are also associated with better health for children**, including increased birth weights and improved health status.
  - These findings are important because considerable evidence links poor health during childhood to lower educational attainment and lower future earnings as well as to poor health during adulthood.

- **State EITCs are also associated with increased health-related quality of life and longevity** among people with low incomes.
The Federal EITC May Boost Children’s School Achievement

• Several studies find that the federal EITC may improve school achievement and increase educational attainment for children. For example, children in families who received larger EITCs:
  — Scored better on reading and math tests, with higher scores for younger children, according several studies, including this one and this one.
  — Were more likely to complete high school, attend college, be employed as a young adult, and earn more, according to other studies, such as this one and this one.

• Children whose families received larger credits from the federal EITC during the spring of their senior year in high school were more likely to enroll in college, according to new research.
The Federal EITC May Increase Children’s Future Earnings

- Boosting low-earning families’ incomes, particularly when children are young, is linked to higher earnings when they grow up, according to research. For example:
  - Children whose families received an additional $3,000 annually (in 2005 dollars) between their prenatal year and fifth birthday earned 17% more, on average, each year in early adulthood, compared to similar children whose families did not receive additional income, according to one study.
  - Children whose families’ incomes increase because they benefit from the federal EITC, specifically, may earn more as adults because the credit is linked to greater school achievement, according to another study.
The federal EITC helps support California jobs and businesses and provides a boost to local communities.

- The federal EITC benefited more than 3 million Californians and brought $7.2 billion in federal funds into the state in 2016.
- Since most people spend their credit on short-term or medium-term needs, the federal EITC creates a ripple effect in local communities. Families’ spending boosts business sales, which supports jobs and increases state and local revenues.
The CalEITC Builds on the Success of the Federal EITC

• Many of the positive effects that research has found for the federal EITC are likely to apply to the CalEITC as well.
• Most filers eligible for the CalEITC are also eligible for federal refundable tax credits, creating potential for enhanced positive effects.
  — The combined resources of the federal EITC and CalEITC may magnify the effects of the federal EITC alone on poverty, employment, and other outcomes.
  — If the CalEITC encourages individuals to file federal taxes as well and claim federal credits like the EITC and Child Tax Credit, families’ resources increase further and more dollars flow into California to stimulate the state economy.
The Governor’s Proposed 2019-20 Budget Would Significantly Expand the CalEITC.

If approved, this expansion would be the largest since the credit was established.
The Proposed Budget Significantly Expands the CalEITC

- **Beginning in tax year 2019, the Governor’s proposal would:**
  - Extend the credit to an estimated 1 million additional tax filers (bringing the total to an estimated 3 million).
  - Increase the size of the credit for many filers who currently qualify for small credits.

- **These two changes combined would more than double the total amount of credits provided** from around $400 million in tax year 2018 to $1 billion in tax year 2019, according to the Administration.
The Proposed Budget Intends to Fully Offset the Cost of the Expanded CalEITC

- The Administration also proposes that California conform to several provisions of the federal Tax Cuts and Jobs Act (TCJA). The intent of this proposal is to raise revenue each year to fully offset the cost of an expanded CalEITC.
  - The TCJA primarily cut taxes for the wealthy and corporations, but it included some reasonable changes that raise federal revenue and would also increase state revenue if California conforms to them.
  - Conforming to these parts of the TCJA would make California's tax code fairer, offset some of the inequitable aspects of the TCJA, and make significant funding available to support investments in Californians with low and moderate incomes.
The Proposed Budget Raises the Income Limits to Qualify for the CalEITC

- **The maximum annual income to qualify for the CalEITC would increase to $30,000** – roughly equal to full-time, year-round earnings at a $15 hourly wage, which will be the state minimum wage as soon as 2022.
  - Currently, the annual income limit for tax filers supporting children is $24,950. The income limit would increase modestly (by 20%) for these filers.
  - Currently, the annual income limit for both tax filers without dependent children and non-custodial parents is $16,750. The income limit would increase substantially (by 79%) for these filers.
Raising the Income Limits Would Allow More Low-Earning Tax Filers to Benefit

- **Raising the CalEITC income limits would extend the credit to additional tax filers who are struggling to make ends meet.** Families and individuals who earn too much to qualify for the CalEITC based on the current income limits likely have difficulty paying for **basic needs**, particularly in high-cost parts of the state, and could benefit from additional income.

- **A higher CalEITC income limit would also preserve eligibility for minimum-wage workers.** The current limit allows families to qualify for the credit if they work full-time, year-round at a $12-per-hour wage. If this limit is not increased, these families will lose eligibility for the credit as the state’s minimum wage rises to $15 per hour.
The Proposed Budget Increases the CalEITC for Many Who Currently Qualify for Small Credits

- Tax filers with incomes in the “tail” end of CalEITC, who are currently eligible for small credits, would see their credit increase substantially. For instance:
  - A family with two children and annual earnings of $16,500 (equivalent to 30 hours of work per week, year-round at the current minimum wage) would see their CalEITC nearly triple, increasing by an estimated $397, from $208 to $605.
  - A family with one child and earnings of $16,500 would see their CalEITC more than triple, increasing by an estimated $328, from $147 to $475.
  - Individuals with no children and who earn $16,500 per year would see their CalEITC increase substantially by an estimated $116, from $3 to $119.
The Proposed Budget Provides an Additional $500 to Families With Young Children

- Families with at least one child under age 6 and earnings up to $28,000 would qualify for an additional $500. This additional credit would be on top of the increased CalEITC for families with incomes in the “tail” end of the credit.
  - A family with two children and annual earnings of $16,500 would see their CalEITC increase by an estimated $897, from $208 to $1,105.
  - The maximum CalEITC for families with at least one young child would increase by $500 to an estimated:
    - $3,379 for those with three or more children;
    - $3,059 for those with two children; and
    - $2,054 for those with one child.
- This additional $500 would function like a child tax credit for working low-income families with young children.
Increasing the size of the CalEITC would provide a more meaningful credit to low-earning workers. For example:

- A parent with an infant and annual earnings of $16,500 could qualify for an estimated $828 more from the CalEITC under the Governor’s proposal. This would likely cover the full-year cost of disposable diapers – a significant expense for low-earning families.

Providing an additional credit to families with young children is supported by research. Studies find that increasing low-income families’ incomes is linked to improved outcomes for children, particularly if families receive income boosts when their children are young.
Boosting Low-Income Families’ Incomes Can Improve Children’s Life Chances

For each $3,000 a year in added income that children in low-income families received before age 6...

...their annual earnings between ages 25 and 37 increased by 17%.

The Proposed Budget Extends the CalEITC to More Tax Filers and Increases the Size of the Credit

CalEITC for Workers Without Children and Non-Custodial Parents, Tax Year 2018

At earnings of $11,000, CalEITC would increase by an estimated $114, from $54 to $168.

At earnings of $16,500, CalEITC would increase by an estimated $116, from $3 to $119.

Source: Budget Center analysis based on personal communication with Department of Finance
The Proposed Budget Includes Several Other Provisions Related to the CalEITC

- **The Governor’s proposal also:**
  - Expresses the Administration’s intent to explore how to allow tax filers to receive the CalEITC (or a portion of it) in monthly payments.
  - Provides $5 million one-time General Fund “to provide matching funds to nonprofits, community-based organizations, or governmental entities that provide increased awareness of the [CalEITC] and free tax preparation assistance to eligible families and individuals.” The 2019-20 budget package included $10 million General Fund for a similar purpose.
The Governor’s Proposed CalEITC Expansion Would Particularly Benefit People of Color and Women With Young Children
More Than 2 in 3 Workers Who Could Benefit From the Governor’s CalEITC Proposal Are People of Color

Additional Ways Policymakers Could Build on and Strengthen the CalEITC
Some Low-Income Californians Who Work and Pay Taxes Are Excluded From the CalEITC

• In order to claim the CalEITC, tax filers and all of the children they claim must have a Social Security Number (SSN) that is valid for work. This means that:
  — Many working immigrants who file their taxes with an Individual Taxpayer Identification Number (ITIN) or a SSN that is not valid for work, as well as many US-born children who have immigrant parents, cannot benefit from the credit.
  — Californians who lose immigration relief such as Deferred Action for Childhood Arrivals (DACA) and Temporary Protected Status (TPS) due to federal actions will no longer qualify for the CalEITC.

• Policymakers could ensure that these Californians have access to the CalEITC by allowing tax filers to claim the credit using a federally assigned ITIN or any federally assigned SSN.
The CalEITC Could Be Modified to Provide a Child Allowance or Serve as a Broader “Caregiver” Credit

- The Governor’s proposed $500 “bonus” credit for families with young children could become a child allowance for all children in families with low incomes.
  - Many rich nations provide some form of child allowance – a monthly cash payment to families for each child in the home, regardless of whether the family has earnings from work. These policies are highly effective in reducing child poverty.
  - The CalEITC could provide a young child allowance by simply extending the Governor’s proposed $500 “bonus” credit to families with young children and no earnings from work.
- The $500 “bonus” credit could also be viewed as a “caregiver” credit that recognizes families’ unpaid caregiving work. As such, the Governor’s proposed $500 credit could be broadened, by providing it to families caring for dependent older adults in addition to those caring for young children.
An Optional Deferred Monthly Payment of the CalEITC Presents No Financial Risk to Tax Filers

A monthly payment of the CalEITC could be deferred or advanced.

- **A deferred payment, which allows filers to receive their credit as monthly payments after filing their taxes, presents no financial risk.** This could function as a savings tool for filers who are financially stable enough to defer their refunds. Deferring payments should be optional because some filers may need or prefer a lump-sum payment.

- **In contrast, an advanced payment, which allows filers to receive their credit as monthly payments before filing their taxes, presents significant financial risk.** Filers eligible for credits large enough to justify advanced payments work part-time and/or part-year, making it difficult to predict their income in advance. This could lead to a large overpayment of the credit, which filers would then have to pay back, because small changes in income can cause large changes in credit.
Expanding Free Tax Preparation Services Could Help More People Get the Full Benefit of Their Tax Refunds

• The **majority** of tax filers who claim the CalEITC pay a commercial preparer to file their taxes. This means that many low-income tax filers are likely losing a substantial share of their tax refunds to tax preparation fees.

• Only **2%** of California tax filers who claim the federal EITC use free tax preparation services, such as Volunteer Income Tax Assistance (VITA) programs, even though most probably qualify for free assistance. In part, this reflects the fact that VITA sites lack the capacity to meet the demand for their services, according to United Ways of California.

• A **modest** state investment in VITA could expand the number of free tax prep sites in underserved areas and allow existing sites to serve more clients. This would help more tax filers to get the full benefit of their refund.
Expanding the CalEITC Would Allow More People to Share in California’s Prosperity
The Bottom Line: Expanding the CalEITC Would Allow More People to Share in California’s Prosperity

- **Earned income tax credits are proven policies.** They not only increase families’ economic security, they may even contribute to a better future for low-income children.

- **The Governor’s proposed expansion of the CalEITC would help more low-income families make ends meet.** People of color and women with young children would especially benefit.

- **Policymakers could further build on and strengthen the CalEITC by:**
  - Ensuring that working immigrant families who file their taxes can benefit from the credit;
  - Modifying the credit to provide a child allowance for all low-income families and/or a caregiver credit to families caring for older adult relatives;
  - Allowing tax filers to opt in to deferred monthly payments;
  - Expanding tax filers’ access to free tax preparation services.
